Labycare-Heart Levers Various (SKSS-MD2007)

Heart Levers Various Manufacturer by LABYCARE

Description :

Heart levers are laboratory instruments used in physiology experiments to record heart movements of animals on a kymograph. They provide accurate mechanical amplification of cardiac contractions for study and analysis. Commonly used in educational and research laboratories, they help demonstrate cardiovascular physiology effectively.

Specifications :
Material: Brass / Stainless Steel
Type: Various (Starling / Simple)
Mounting: Stand compatible
Application: Cardiac physiology experiments

Finish: Polished, corrosion-resistant
