Labycare-Mosses Ergograph (SKSS-MD2034)

Mosses Ergograph Manufacturer by LABYCARE

Description :

Mosso’s ergograph is a physiology instrument used to measure muscle work and fatigue, typically using finger contractions. It records the amount of work performed over time, helping study endurance and fatigue. Widely used in laboratories, it provides accurate analysis of muscular performance under controlled experimental conditions.

Specifications :

Type: Mechanical ergograph
Measurement: Muscle work and fatigue
Mechanism: Finger contraction with weight load
Recording: Compatible with kymograph
Adjustment: Variable load system

Mounting: Table/stand mounted
