

Labycare-Autoclave Fumigator (SKSSAS012)

Autoclave Fumigator Manufacturer by LABYCARE

Description :

Model No: SKSSAS012

The **Autoclave Fumigator** is a specialized sterilization unit designed to disinfect and sterilize medical instruments, laboratory equipment, and other sensitive materials using controlled fumigation techniques. Constructed from high-quality stainless steel, it ensures durability, corrosion resistance, and long-lasting performance. The unit provides efficient sterilization through chemical vapors or gas-based fumigation, making it ideal for items that cannot withstand high-temperature steam. Equipped with a secure locking system, pressure control, and safety features, it ensures safe operation for healthcare, pharmaceutical, and research environments. Compact and user-friendly, the Autoclave Fumigator delivers consistent, effective sterilization while maintaining operational safety and efficiency.

Details

Autoclave Fumigator

Stainless Steel (Corrosion Resistant)

Fumigation (Chemical/Gas-based)

Heavy-duty secure locking

Multiple sizes available (5 to 50 liters)

Controlled low-temperature operation

Electric or Manual Heating (depending on model)

Pressure gauge, safety valve, chemical-resistant chamber

Applications

Hospitals, Laboratories, Pharmaceutical &
Research Facilities

Design

Compact, portable, easy-to-operate, durable
