

Labycare-X-Blocks (SKSS-MD2014)

X-Blocks Manufacturer by LABYCARE

Description :

X-blocks are positioning aids used in radiography to support and stabilize body parts during X-ray procedures. They help achieve accurate alignment and improve image quality. Made from radiolucent materials, they do not interfere with imaging, ensuring clear diagnostic results in hospitals and diagnostic centers.

Specifications :

- Radiolucent material for clear imaging
- Lightweight and easy to handle
- Provides stable patient positioning
- Durable and easy to clean
- Available in various sizes and shapes

Suitable for X-ray and imaging procedures
