Labycare-Mygraph Board With Crank Lever (SKSS-MD2027)

Mygraph Board With Crank Lever Manufacturer by LABYCARE

Description :

Myograph board with crank lever is used in physiology experiments to study muscle contraction and movements. It provides a stable platform for mounting tissue and recording devices. The crank lever mechanism helps apply controlled motion, enabling accurate recording of muscle responses in laboratory experiments.

Specifications :

Material: Wooden/metal base
Mechanism: Crank lever system
Mounting: Stand and clamp compatible
Operation: Manual rotation
Use: Muscle contraction experiments

Finish: Durable and corrosion-resistant parts
